**Answer 1:-** After the Seed lab setup on Virtual Box, it looks like the following. Please find below screenshot for reference:-

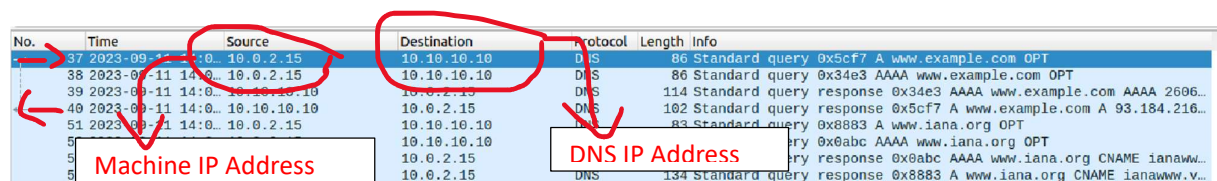

**Answer 2:-** On Opening the website(www.wxample.com) on Firefox browser -, we are able to fetch the IP address of the website along with the DNS IP and machine IP.

- (a) The **website IP address** can be found in the response packet number 40 that is received from the website.

- (b) On Accessing website, the request was sent which is visible in packet 37 information and we received response in the form of packet which is having information of response in packet number 40 as per above screenshot.

**My Machine IP Address** = source IP address of packet number 37 = 10.0.2.15 and

**Destination IP Address** = DNS Server IP Address = 10.10.10.10
